

AC MANUAL GEN2 WINCH BOX OWNERS MANUAL

lift ***tech*** Marine
218-454-0682

WWW.LIFTTTECHMARINE.COM

Operating the AC Motor:

Use the key to go up or down. Make sure to wait 1-3 seconds before changing directions so the relays have time to click out.

Power Outage:

In case of a power outage, use the provided back up bit (see image below) on the end of the shaft with your drill. Visit our website to watch a video on how to use the back up bit.

Power Requirements for AC:

All power used on your dock or lift needs to be GFI Protected at the shoreline. Extension Cords must be 12/3 and under 150 feet. Circuit Breaker 20 AMPS GFI. **Always disconnect power when lift is left unattended to avoid lightning strikes and power surges.**

Maintenance:

Our motors are self-lubricating and do not need any maintenance. We recommend to lubricate the chains once a year inside the winchbox.

Troubleshooting:

Always start by unplugging the unit for 2 minutes. This will allow the circuit board to reset. Go to liftechmarine.com for more information, troubleshooting and how to videos.

Pendant:

We offer an optional 20-foot pendant that can be purchased and plugged directly into your motor. Pendant works without the key.

Off-Season Storage:

Do not cover the motor in a plastic bag over the off season—it traps condensation and voids the warranty.

Website:

Go to www.liftechmarine.com for more information, troubleshooting and how to videos.

Warranty Registration
